DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121
 - I. Claims 1-12 are drawn to screening methods and compounds for measuring altered vimentin activity, classified in class 435, subclass 7.1 for example.
 - II. Claims 13-23 are drawn to a method for killing pathogens, classified in class 435, subclass 5 for example.
2. The inventions are distinct, each from the other because of the following reasons:

The method inventions of **I** and **II** are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have distinct functions, effects, and modes of operation. The method of invention **I** detects compounds that effect secretory vimentin activity. Specifically, the method comprising two polypeptide sequences and one or more test compound(s). The method of invention **II** is directed to killing a pathogen. A pathogen is not required in the method of invention **I** while two polypeptide sequences are not required for invention **II**.

Therefore, the methods detect different events, which have diverse effects/functions (screening for test compounds affecting vimentin in Group **I** and killing a pathogen in Group **II**) and utilize diverse reagents (two polypeptide sequences in invention **I** and a pathogen in invention **II**) therefore the inventions are diverse and distinct (different method limitations).

They each require separate search and consideration with respect to the prior art and are therefore subject to restriction.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and **do not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.

Because these inventions are distinct for the reasons given above and the search required for all the groups is not totally inclusive, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to David A. Casimir (42,395) on 5/31/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1641

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 – Central Fax number is (571) 273-8300, which is able to receive transmissions 24 hours/day, 7 days/week. In the event Applicant would like to fax an unofficial communication, the Examiner should be contacted for the appropriate Right Fax number.
